Introduction

Mortality improvements over the past decades have been impressive.

Introduction

Mortality improvements over the past decades have been impressive.

→ Key question: How will mortality evolve in the future?

Introduction

Mortality improvements over the past decades have been impressive.

- Key question: How will mortality evolve in the future?
- The answer considerably depends on the model used and the expert's opinion.

Aim of this work

Investigate what would be the impact of using different mortality models on periodic and generational life tables.

Aim of this work

Investigate what would be the impact of using different mortality models on periodic and generational life tables.

→ Why is it such an important question?

Conclusion

Comparing Menthonnex [2009] and Menthonnex [2015] - cont'n

	Menthonnex (2009)	Menthonnex (2015)
Espérance de vie à la naissance		
Femmes, 2010	84.8	84.5
Hommes, 2010	80.1	80.1
Femmes, 2030	87.4	87.6
Hommes, 2030	83.1	84.1
Femmes, 2050	89.3	89.8
Hommes, 2050	85.3	86.6
Espérance de vie à 65 ans		
Femmes, 2010	22.2	22.1
Hommes, 2010	18.9	18.8
Femmes, 2030	24.3	24.3
Hommes, 2030	21.2	21.7
Femmes, 2050	26.0	26.1
Hommes, 2050	22.9	23.6

Figure: Life expectancy using periodic life tables

Comparing Menthonnex [2009] and Menthonnex [2015] - cont'n

	Menthonnex (2009)	Menthonnex (2015)
Espérance de vie à la naissance		
Femmes nées en 1950	83.5	83.4
Hommes nés en 1950	77.2	77.5
Femmes nées en 2015	92.0	92.4
Hommes nés en 2015	88.2	89.6
Femmes nées en 2030	92.8	93.2
Hommes nés en 2030	89.2	90.6
Espérance de vie à 65 ans		
Femmes nées en 1950	24.5	24.4
Hommes nés en 1950	21.1	21.6
Femmes nées en 2030	29.4	29.5
Hommes nés en 2030	26.6	27.5

Figure: Life expectancy using generational life tables

Comparing Menthonnex [2009] and Menthonnex [2015] - cont'n

	Proportion atteignant 100 ans			
	Menthonnex (2009)		Menthonnex (2015)	
	Hommes	Femmes	Hommes	Femmes
Génération 1900	0.20%	0.90%	0.20%	0.90%
Génération 1950	4.40%	9.20%	5.60%	9.70%
Génération 2000	12.80%	20.50%	17.00%	21.00%

Figure: Proportion of people reaching age 100

Comparing Menthonnex [2009] and Menthonnex [2015] - cont'n

- ▶ According to Menthonnex [2009]:
On constate que la mortalité calculée pour les hommes nés en 2000 est du même ordre de grandeur que celle des femmes nées en 1950.
- ▶ According to Menthonnex [2015]:
On constate que la mortalité calculée pour les hommes nés en 2000 est du même ordre de grandeur que celle des femmes nées vers 1970.

Comparing Menthonnex [2009] and Menthonnex [2015] - cont'n

- ▶ According to Menthonnex [2009]:
On constate que la mortalité calculée pour les hommes nés en 2000 est du même ordre de grandeur que celle des femmes nées en 1950.
- ▶ According to Menthonnex [2015]:
On constate que la mortalité calculée pour les hommes nés en 2000 est du même ordre de grandeur que celle des femmes nées vers 1970.

→ The same model applied on slightly different timeframes can produce important differences in terms of results.

Background

- ▶ Swiss official mortality tables for private pension funds.
- ▶ First tables were published in 2002 (LPP 2000).
- ▶ Provide an option to forecast mortality: the Menthonnex model.

Table	Period of observation	Year of observation
LPP 2010	2005-2009	2007
LPP 2015	2010-2014	2012

Table: Period of observation

Concept

We focus the analysis on the impact the change from the LPP 2010 to the LPP 2015 table has on the mathematical reserves of current pensioners. Therefore, for each year (e.g. 2015), these mathematical reserves can be computed using different techniques:

Concept

We focus the analysis on the impact the change from the LPP 2010 to the LPP 2015 table has on the mathematical reserves of current pensioners. Therefore, for each year (e.g. 2015), these mathematical reserves can be computed using different techniques:

- ▶ Use the LPP 2010 table (centred in 2007) + a longevity reserve;

The longevity reserve = $0.5\% \cdot (\text{current year} - \text{year of publication of the table}) \cdot \text{liabilities}$.

Concept

We focus the analysis on the impact the change from the LPP 2010 to the LPP 2015 table has on the mathematical reserves of current pensioners. Therefore, for each year (e.g. 2015), these mathematical reserves can be computed using different techniques:

- ▶ Use the LPP 2010 table (centred in 2007) + a longevity reserve;

The longevity reserve = $0.5\% \cdot (\text{current year} - \text{year of publication of the table}) \cdot \text{liabilities}$.

→ In our example: $(2015-2007) \cdot 0.5\% = 4\%$.

Comparison with other mortality forecasting models

Conclusion

Conclusion

Which type of table should we use?

Conclusion

Which type of table should we use?

- ▶ Generational tables: directly incorporate futur mortality evolution as perceived at the time the forecast is made
→ more prudent

Conclusion

Which type of table should we use?

- ▶ Generational tables: directly incorporate futur mortality evolution as perceived at the time the forecast is made
→ more prudent
- ▶ Periodic tables: less sensitive to the choice of the mortality forecasting model (and fitting period).

Conclusion

Which type of table should we use?

- ▶ Generational tables: directly incorporate futur mortality evolution as perceived at the time the forecast is made
→ more prudent
- ▶ Periodic tables: less sensitive to the choice of the mortality forecasting model (and fitting period).

⇒ Whenever a new table is released, pension funds using generational tables will most likely need to make more substantial adjustments (positive or negative) to their liabilities than institutions using periodic tables.

Conclusion

Which type of table should we use?

- ▶ Generational tables: directly incorporate future mortality evolution as perceived at the time the forecast is made
→ more prudent
- ▶ Periodic tables: less sensitive to the choice of the mortality forecasting model (and fitting period).

⇒ Whenever a new table is released, pension funds using generational tables will most likely need to make more substantial adjustments (positive or negative) to their liabilities than institutions using periodic tables.
